General information

Except Xedos 9 2,3

- n Refer to the How to use this manual section for: general test conditions, terminology, detailed descriptions of wiring faults and a general trouble shooter for electrical and mechanical faults.
- n Trouble codes are displayed by using an LED connected to the data link connector (DLC).
- d Except 323 1998-», 626/Estate/MX-5 1997->: Engine control module (ECM) displays all available diagnostic information for immobilizer system.
- n DLC without wiring/terminals in positions FAT & TAT: Engine control module (ECM) incorporates transmission control function.
- n DLC with wiring/terminals in positions FAT & TAT: Transmission control module (TCM) mounted separately.

The ECM fault memory can also be checked and erased using diagnostic equipment connected to the data link connector (DLC).

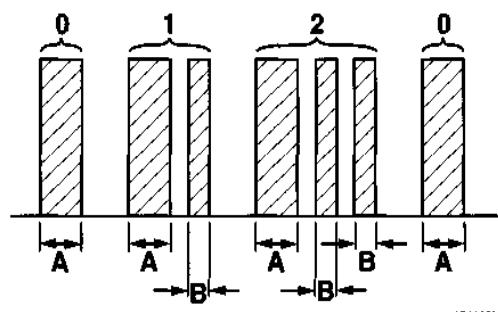

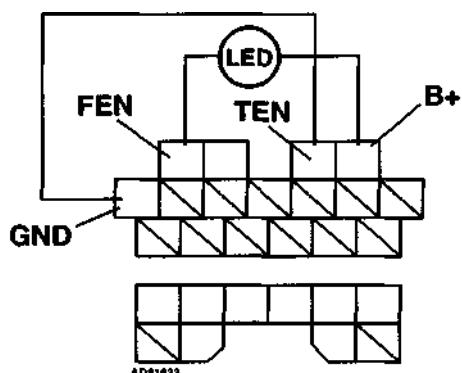

Xedos 9 2,3

- n Refer to the How to use this manual section for: general test conditions, terminology, detailed descriptions of wiring faults and a general trouble shooter for electrical and mechanical faults.
- a Trouble codes are displayed by using an LED connected to the data link connector.
- n Engine control module (ECM) displays all available diagnostic information for immobilizer system.
- Q Transmission control module (TCM) mounted separately.
- n Data bus connecting ECM to TCM allows faults relating to both systems to be displayed when accessing ECM fault memory.
- n The ECM/TCM fault memory can also be checked and erased using diagnostic equipment connected to the data link connector (DLC).

Accessing

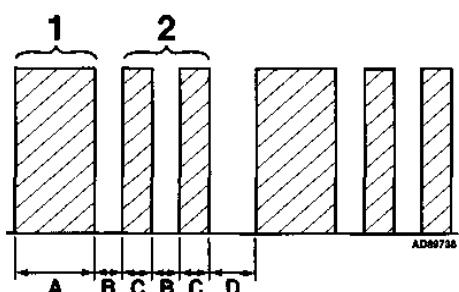

- Ensure ignition switched OFF.
 - Bridge data link connector (DLC) terminals GND and TEN 1
 - Connect LED test lamp between terminals FEN and B+ D.
- NOTE:** Connect *LED test lamp positive connection to DLC terminal B+*.
- Switch ignition ON.
 - Count LED flashes. Note trouble codes. Compare with trouble code table.
 - Two digit trouble codes are displayed as follows:
 - Long flashes indicate the 'tens' 2 [A].
 - Short flashes indicate the 'units' 2 [C].
 - For example: Trouble code 12 displayed 2.
 - Four digit trouble codes are displayed as follows:
 - Each trouble code consists of four groups.
 - A long flash indicates the start of each group 3[A].
 - Short flashes indicate the digits of each group 3 [B].
 - No short flashes in a group indicate '0'.
 - For example: Trouble code 0120 displayed 3.
 - Switch ignition OFF. Rectify faults as necessary.

Erasing

Ensure ignition switched OFF.
 Disconnect battery earth lead for at least 30 seconds.
 Depress brake pedal for at least 20 seconds.
 Reconnect battery earth lead.
 Repeat checking procedure to ensure no data remains in ECM fault memory.

WARNING: *Disconnecting the battery may erase memory from electronic units (e.g. radio, clock).*
